

How to Create Workspace, assign Schema and Administration

Login

Enter Application Express workspace and credentials.

Workspace

Username

Password

[Click here to learn how to get started](#)

Fig: 1 Log in to Internal Workspace.

Note :

If you forget the internal workspace Admin password then log into SQL as sys with sysdba privilege

And run the below script. (you must get into to the directory where the below script located before running them)

```
SQL > @apxxepwd.sql
```

Or

```
SQL > @apxchpwd.sql
```

And type your desired password.

After log in to Internal workspace . click the “Manager Workspaces” button as shown in the Fig : 1

Fig : 1 Showing Button list.

Now if you want to create new workspace then click “ Create Wrokspace”

Then type your desired workspace name like “MY_SPACE”

Then Next >

Now you have to assign Schema and the Quota.

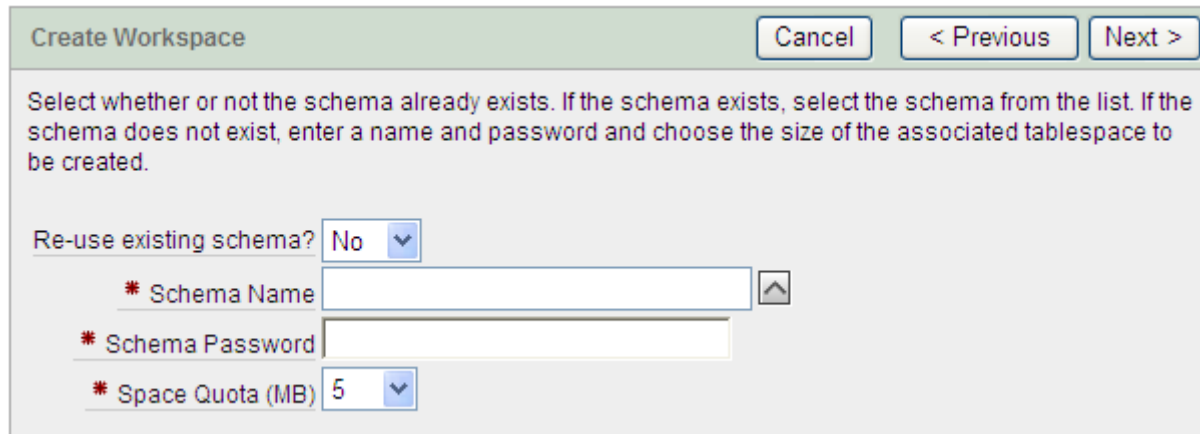

Fig : 2 showing Schema and quota Fields

If you have schema already then you can select YES for “Re-use existing Schema?” otherwise select NO

Note : if you want to say “NO” for Re-use Existing Schema that means you want to assign a new schema . In that case it is better you create user schema from SQL prompt.

Log in SQL prompt as sys with sysdba privilege :

SQL>

```
CREATE USER MYUSER  
IDENTIFIED BY MYUSER;
```

```
SQL > GRANT CONNECT,RESOURCE TO MYUSER;
```

```
SQL > ALTER USER MYUSER DEFAULT TABLESPACE APEX_SPACE;
```

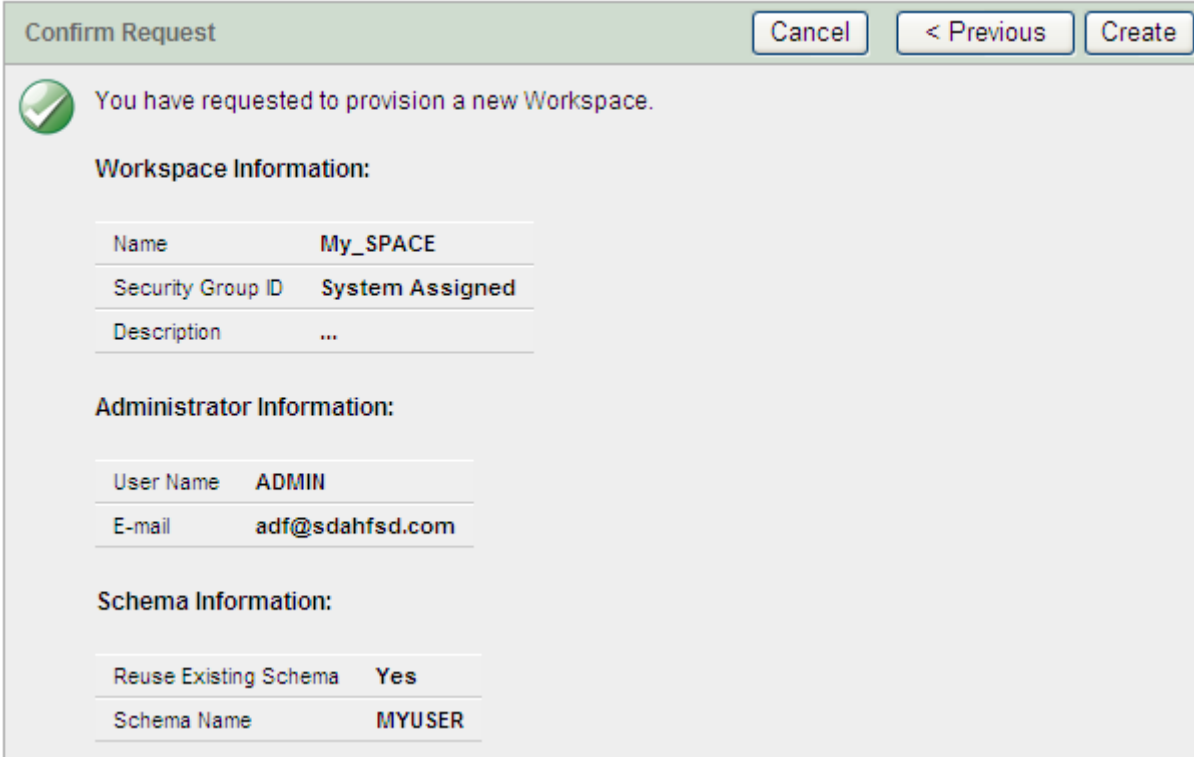

```
SQL > ALTER USER MYUSER QUOTA UNLIMITED ON APEX_SPACE;
```

dbhossain@yahoo.com

After creating user select Re-use existing schema = yes and assign new user "MYUSER" to new workspace "MY_SPACE"

Then click next and assign the Admin password and other necessary fields and click Next >

And you will get a feedback as per your choice and selection.

The screenshot shows a 'Confirm Request' dialog box with a green header bar. At the top right are three buttons: 'Cancel', '< Previous', and 'Create'. Below the header is a green checkmark icon and the text 'You have requested to provision a new Workspace.' The dialog is divided into three sections: 'Workspace Information:', 'Administrator Information:', and 'Schema Information:'. Each section contains a table of details.

Workspace Information:	
Name	My_SPACE
Security Group ID	System Assigned
Description	...

Administrator Information:	
User Name	ADMIN
E-mail	adf@sdaahfsd.com

Schema Information:	
Reuse Existing Schema	Yes
Schema Name	MYUSER

Now click create button and your workspace is created. Now you can log in your new workspace.

How to administration Workspace:

Creating new user, assigning Privilege (developer, admin, user)

For workspace administration configuration you have to log in again in internal workspace as shown before.

So after log in to Internal Workspace select

Manage workspaces > Existing Workspaces > Click Workspace from the list

And then go to the "Manage Application Developers" and "Manger users" section.

Fill up the required field and create as many user you required and assign privilege accordingly.
